

Snorry — App Brand Guide (Developer Companion)

Companion to the marketing **Snorry Brand Guide v3.0** (PDF). The PDF covers Instagram, ads, and App Store creative. This document is the **implementation spec** for the iOS app UI, copy, and design tokens.

Marketing PDF: docs/resources/ (see [docs/resources/README.md](#)). Filename may read `snorry-brand-guide-v12.pdf` ; cover version is **v3.0**.

Code tokens: [Snorry/Utilities/Theme.swift](#)

1. Vocabulary (hybrid model)

Use consistent user-facing language. Internal Swift names (`MonitorViewModel` , `MonitoringUsageTracker` , analytics keys) stay unchanged.

Context	Term	Example
Tab label	Tonight	Bottom nav (formerly Monitor)
Session limits / counts	recording	"8 free recording sessions remaining"
Start / stop actions	recording	Nav title Recording ; "Stop Recording"; VoiceOver "Start recording"
Live session reassurance	listening	Subline We're listening for snores. (not the nav title)
Marketing primary	Understand your Nights	Future header/onboarding pass

Do not say (user-facing): "monitoring session", "Stop monitoring" (use recording), fear-driven or medical claims.

2. Color tokens

Marketing palette (reference)

Token	Hex	Role
Deep Space Navy	#0A0B1E	Primary background (dark)
Snorry Purple	#7C3AED	Accent, highlights
CTA Purple	#381D92	Primary action buttons (marketing)
Dream Blue	#60A5FA	Secondary accent
Soft Lavender	#A78BFA	Subtext, gradients
Morning Mist	#EDE9FE	Light lifestyle backgrounds (marketing only)
Pure White	#FFFFFF	Primary text

Muted Gray	#8B8FAD	Secondary text
------------	---------	----------------

App functional tokens (Theme.swift)

Token	Role
background, surface, surfaceSecondary	Screens and cards
accent, accentGradient	Links, tab tint, START button
snoring, snoringGradient	Confirmed snoring state
good	Quiet / success
warning	Detecting pattern
stopGradient	Stop Recording button
labelPrimary, labelSecondary, labelTertiary, labelOnSurfaceSecondary	Text hierarchy (secondary 75%, tertiary 52%, on-surface 68% white)

App policy: Dark-only UI. Morning Mist is for marketing lifestyle posts, not in-app light mode.

3. Typography

Marketing & web (see PDF)

Website and social use the **Snorry Brand Guide v3.0** (PDF) — not duplicated here. Typical split:

Use	Font
Display / hero headlines	Serif display (PDF names the family)
Body, nav, buttons, UI	Inter (400–900)
Lifestyle overlay lines	Inter Semibold/Bold or brand purple (e.g. <i>Understand your Nights</i>)

Do not use Noteworthy or app serif faces on the web unless the PDF adds an explicit web script pairing.

iOS app

Use	Font
UI default	SF Pro (system .body, .caption, etc.)
Wordmark “Snorry” on Tonight home	SF Rounded Bold
Handwritten accent	Noteworthy via Theme.handwritten + Theme.handwrittenGradient
Stats, timers, chart axes	Monospaced digits (Theme.monoDigit)

Noteworthy — approved placements only: Tonight home subtitle (*Sleep Snore Alert & Tracking*), watch hint, onboarding tagline, START letter animation. Paywall may use Noteworthy for decorative wordmark only.

Noteworthy rules: Prefer **Noteworthy-Bold**; avoid Light below 17pt. Minimum **13pt** for readable accent lines (watch hint). Always pair with `handwrittenGradient` on dark backgrounds unless the PDF specifies otherwise. **Max one or two short lines per screen** — never for settings, cards, charts, or body copy.

Text hierarchy on dark UI: `labelPrimary` → `labelSecondary` (75%) → `labelTertiary` (52%). Card sublabels on `surface` use `labelOnSurfaceSecondary` (68%) — especially `.caption2` on cards.

Minimum sizes: Body 14pt; captions 11pt; headlines 22pt on mobile. Nav titles must fit inline without truncation on iPhone SE (~20 characters max).

App policy: No bundled Inter, no serif, no custom web fonts in-app.

4. Spacing scale

Marketing grid: 4, 8, 16, 24, 32, 48, 80 px. Prefer these in new layout work; existing screens may use legacy values until refactored.

5. Motion

Duration	Use
200 ms	Micro-interactions, press (0.97× scale)
350 ms	Screen transitions
500 ms	Modals / sheets

Default easing: ease-in-out. Spring damping ≥ 0.7 for sheets only. Respect `prefers-reduced-motion`. Infinite pulse allowed only on live snoring status badge during an active session.

6. Screen specs

Tonight (home tab)

- **Nav:** Toolbar app icon + Help (?)
- **Header:** Snorly wordmark; handwritten subtitle (brand alignment TBD)
- **Hero:** Large START circle — moon, waveform, mic + **START**; caption **Tap to start recording** directly below the circle
- **Free tier hint:** N free recording session(s) remaining
- **Alert Setup card:** Collapsed by default; caption "Used for the next recording session"
- **Last Session card:** Always visible. Three columns: Sleep duration / Snore events / Snore duration. Empty state: all — + footer *No recordings yet*.

Marketing screenshots: Prefer real app UI; crop tab bar labels if phone appears small in posts.

Live session (recording screen)

- **Nav title:** Recording
- **Tab bar:** Hidden for the duration of the session
- **Greeting (scroll content):** Good night, {firstName}. or Good night. when no name in Settings → Profile
- **Subline:** We're listening for snores.
- **Status badge (dynamic):** Quiet · Detecting Pattern... · Snoring Detected

- **Stop button:** Stop Recording / Stopping...
- **Overlay on stop:** Saving session...

Do not replace status badge copy with listening language — badge shows live detection state.

7. Approved copy library

Tonight (home)

Element	Copy
START caption (below circle)	Tap to start recording
Watch hint (below free-tier line)	Connect your watch · get Snore alerts on your wrist
Free sessions	{N} free recording session(s) remaining
Free limit	Free recording limit reached. Upgrade to Premium to continue.
Last Session empty footer	No recordings yet.
Alert Setup caption	Used for the next recording session
Mic permission	Microphone access required to record snoring
VoiceOver START	Label: Start recording · Hint: Begins an overnight snore recording session

Live session

Element	Copy
Nav title	Recording
Greeting (name set)	Good night, {firstName}.
Greeting (no name)	Good night.
Subline	We're listening for snores.
Stop button	Stop Recording
Stopping	Stopping...

Settings — Profile

Element	Copy
Section	Profile
Field placeholder	Your name
Footer	Optional. Used for a personal "Good night" greeting when you start recording.

Tab bar

Tab	Label	Icon
Home	Tonight	Moon + star (<code>moon.stars.fill</code> or <code>TabTonightIcon</code> asset)
History	History	<code>clock.arrow.circlepath</code>
Insights	Insights	<code>chart.line.uptrend.xyaxis</code>
Settings	Settings	<code>gearshape</code>

8. Accessibility

- WCAG AA contrast on dark backgrounds
 - Never use color alone for chart meaning — add labels
 - VoiceOver labels must match visible action vocabulary (recording / listening as above)
 - Nav titles: short; full sentences go in body/subline
-

9. Out of scope (future passes)

- Header rewrite to "Understand your Nights" / demote watch subtitle
 - Theme.swift alignment to marketing hex values
 - Spectrum card technical copy simplification
 - Bundled Inter font
-
